

FACE PECEPTION
Course Syllabus
Fall, 2014

Course: Soc Sci 239A
Code: 68855

Lecture: TuTh 2:00-3:30
Room: ICS 243

TEXT: Journal articles, listed below

PROFESSOR: Don Hoffman
Office: SBSG 2566
Phone: 824-6795
Office Hrs: Tu 3:30 – 4:20

SECRETARY: Justine Sarashid
Office: SSPA 2135
Phone: 824-6336

GENERAL INFORMATION

Face processing has emerged as a major research area within cognitive neuroscience. PET and fMRI studies suggest that there are areas of human cerebral cortex specialized to process faces. EEG studies reveal face-specific ERPs, some affected by prior familiarity with a face, and one that is not. Psychophysical studies document unique properties of face perception, including the observations that 2D inversion or photographic negation of a face dramatically impair recognition. Computational and neural network modelers have proposed numerous theories of face identification and emotional recognition. In this seminar we will study the recent research in each of these areas. For the first three weeks I will introduce the basic issues and theories of face processing. For the last seven weeks we will discuss one or two journal articles at each meeting, with the discussion led by a different student each time. Our goal is to know the state of the art of this field by the end of the quarter, and to propose new theories and experiments that will advance the state of the art.

Your grade will be based on the seminars you lead and on a paper due at the end of the quarter. Your grade for the seminar presentation will be based on how well you master the material you present, how clearly you present its essence, and how penetratingly you critique its strengths and weaknesses. You are, of course, expected to have read whatever material is the subject for discussion in each session, whether or not you are the primary presenter. Come prepared with questions for the discussion leader, critiques of the material, and general comments. To make sure that we all read the material, at the beginning of each class we will put all of our names in a hat and draw one out at random. The person whose name is drawn will open the class with a five-minute summary of the material for that day.

The paper should be ten-paged, double-spaced, typewritten, and should present either a new theory of some aspect of face processing, or a new experiment with a detailed design. The paper should present your theory or experiment in the context of the current research literature. Of course I expect the paper to be flawless in style, grammar, and punctuation.

SCHEDULE OF LECTURES AND READINGS

<i>Lecture</i>	<i>Date</i>	<i>Topic</i>	<i>Paper</i>
1	Th 10/2	Introduction	—
2	Tu 10/7	Introduction	—
3	Th 10/9	Introduction	—
4	Tu 10/14	Introduction	—
5	Th 10/16	Introduction	—
6	Tu 10/21	Introduction	—
7	Th 10/23	Seminar	Daniel Stehr, 19
8	Tu 10/28	Seminar	3
9	Th 10/30	Seminar	6
10	Tu 11/4	Seminar	11, 13
11	Th 10/6	Seminar	10
12	Tu 11/11	Veterans Day	
13	Th 11/13	Seminar	2
14	Tu 11/18	Seminar	9
15	Th 11/20	Seminar	1
16	Tu 11/25	Seminar	14
—	Th 11/27	Thanksgiving Holiday	
17	Tu 12/2	Seminar	4,5
18	Th 12/4	Seminar	15
19	Tu 12/9	Seminar	12
20	Th 12/11	Seminar	18
—	Th 12/18	FINAL — 1:30 - 3:30
